Título: The Galactic O-Star Spectroscopic Survey (GOSSS): current status

Nombre (Autor que presenta): Jesús

Apellidos (Autor que presenta): Maíz Apellániz

Apellidos y nombre de los autores: Maíz Apellániz, Jesús

Resumen:

The Galactic O-Star Spectroscopic Survey (GOSSS) is a long-term project whose main objective is to obtain high-quality intermediate-resolution blue-violet spectroscopy of all optically accessible Galactic O stars. I will present our recent work on this survey, which includes the publication of the third large paper, the release of the associated data, updates on the software, and other additions to the Galactic O-Star catalog (GOSC). I will also discuss our plans for the future, including the use of different telescopes, the connection with WEAVE, and how the incoming Gaia data releases will affect the survey results.
